Ride Rite® Level III paper inflatable dunnage bags are constructed and certified compliant with the Product Performance Profile for Pneumatic Dunnage (PPPPD) specification established by the Association of American Railroads (AAR). This is not a construction standard, but a performance standard. Document GIB No. 9 PPPPD.PDF is printed and attached to this Product Specification Sheet, or if digitally transmitted, attached to this Product Specification Sheet file as a separate document.

Current Construction Standards 1/09

1. Ride Rite® Level III paper inflatable dunnage bags are constructed of six (6) plies of Rule 40 Certified High Performance Kraft extensible paper. Bags are available with a one side laminated polyethylene external ply, or standard uncoated kraft paper.
2. An internal bladder is constructed of 4.5 mil polyethylene film. Ends are heat sealed.
3. A valve to facilitate inflation/deflation is heat sealed to the internal bladder.
4. The longitudinal center seam of all paper plies is secured with hot melt adhesive, and the end closure seams of the bag are secured with a compatible cold set adhesive.
5. Destructive burst pressure for Level III bags must meet or exceed 25 psig in a 12" void for one (1) minute. Load impact testing is compliant with PPPPD AAR Standard.
6. This bag is appropriate for end to end rail car bracing where the total load weight does not exceed 160,000 lbs.
7. Bags will withstand a maximum load weight of 46,500 lbs.
8. Maximum working inflation pressure for Level III paper bags is 8 psig.
9. Bags manufactured for standard retail sale are continuously printed with the following information:

Ride Rite®  
ITW Shippers Products  
800-468-1230  
Warning/Caution labels in four (4) languages (English, German, French, and Spanish)
